PROFILE

I'm a senior software engineer with 8 years of experience at Atlassian, Amazon, and early-stage startups. I've built products from the ground up and led frontend engineering within a 14-15-person team across three time zones, while helping backend engineers grow into full-stack contributors. My work includes platforms linked to more than \$9.5M in annual savings and an Amazon workflow where lead time fell from 1-2 weeks to 1-2 days. My core strengths are React, TypeScript, Next.js, frontend architecture, performance, accessibility, and testing, with hands-on experience across Node.js, Java, Spring Boot, GraphQL, and REST APIs. I use Claude, Codex, and Cursor in day-to-day development and have built LLM workflows involving agent orchestration, prompt engineering, groundedness evaluation, and tool integrations. I'm open to relocating across Europe or to the UAE.

EDUCATION

Master's in Artificial Intelligence and Machine Learning 11/2025 – Present | Liverpool, United Kingdom
Liverpool John Moores University

Executive Post Graduate Programme in Machine Learning and Artificial Intelligence with Specialization in Generative AI 05/2024 – 10/2025 | Bangalore
International Institute of Information Technology Bangalore (IIIT Bangalore)

Bachelor of Engineering in Computer Science, RNSIT 2014 – 2018 | Bangalore, India

WORK EXPERIENCE

Aristoplan (Independent Product Development), Founder / Product Engineer 04/2026 | Bengaluru, India

- Designing Aristoplan, a multi-tenant education operations platform spanning organization and access, curriculum, academic planning, enrollment and billing, learning delivery, teacher compensation, and profitability.
- Defined bounded contexts, a context map, ubiquitous language, and architecture decision records to model complex academic and financial workflows before implementation.
- Established a modular pnpm/Turborepo architecture with React 19, TypeScript 7, reusable UI and tooling packages, Vitest, Testing Library, strict dependency boundaries, and automated formatting, linting, type checks, tests, and production builds.
- Use Claude and Codex for AI-assisted product discovery, domain modeling, architecture reviews, prototyping, refactoring, documentation, and test scaffolding while critically validating generated output.

Atlassian, Senior Software Engineer 02/2024 – 03/2026 | Bengaluru, India

- Led all frontend engineering for a 14-15-member cross-functional team, setting technical direction, React/TypeScript architecture, delivery standards, and API integration patterns while partnering with Java/Spring Boot backend, product, design, data, and support stakeholders.
- Redesigned help-article discovery and search workflows, navigation, trust signals, and data-source integrations, contributing to \$5M+ in annual savings; supported additional initiatives associated with approximately \$3M and \$1.5M in cost savings.
- Designed and built a multi-agent ticket-analysis pipeline that processed thousands of support tickets using coordinator, identifier, verifier, and rating agents, prompt engineering, accuracy and groundedness evaluation, message queues, and tool/action plugins to prioritize automation opportunities and reduce manual review.
- Mentored 3-4 backend engineers into full-stack contributors, expanding delivery capacity and reducing frontend bottlenecks.
- Owned end-to-end feature delivery across stakeholder alignment, requirements, task decomposition, architecture reviews, execution, rollout, and cross-team coordination.

Amazon, Frontend Engineer II 05/2022 – 01/2024 | Bengaluru, India

- Led the redesign of an internal X-Ray content-ingestion pipeline using React and Java, shaping API contracts, application data flow, and frontend architecture to replace deprecated tooling.
- Reduced ingestion lead time from 1-2 weeks to 1-2 days while cutting operator effort by approximately 50%.
- Owned frontend delivery end to end and partnered with the ML team to translate model outputs into intuitive operator workflows, enabling richer extraction of cast details from end credits.

fabric, Software Developer 2 03/2022 – 05/2022 | Bengaluru, India

- Contributed to storefront architecture and development for composable commerce experiences tailored to customer needs.

Spacejoy, Software Developer III

11/2019 – 02/2022 | Bengaluru, India

- Joined the early four-person frontend/backend engineering team and architected a 0-to-1 platform using React, Next.js, and Tailwind CSS that scaled from launch to more than 5,000–10,000 users.
- Owned frontend delivery across internal dashboards, project-management tools, e-commerce and storefront experiences, a CMS, and role-based access management; interviewed candidates, mentored engineers, and coordinated with product, backend, 3D, and Unity teams.
- Built an internal storefront with budget-aware cart workflows and implemented cross-product authentication across customer and designer experiences.
- Developed a Three.js 3D model viewer and partnered with Unity engineers to deliver 360-degree product visualization across internal and customer-facing storefronts.
- Contributed to the React Native application and helped ship it to the App Store within two months of project inception.

ClearTax, Software Developer I

04/2019 – 10/2019 | Bengaluru, India

- Contributed from initial planning through frontend architecture reviews for ClearGST, ClearTax’s B2B GST-filing platform, collaborating across product and engineering teams.
- Built reusable React, Next.js, and GraphQL components that improved UI consistency and accelerated feature delivery across the application.

Throughbit, Software Developer

06/2018 – 04/2019 | Bengaluru, India

- Built interfaces for interacting with blockchain nodes and executing transactions on an OTC platform using **bitcoin, MongoDB, and Node.js**.
- Designed and implemented a security-focused transaction component for Bitcoin-based coins, enabling offline signing and separate transaction publishing for safer wallet transfers.
- Generated **candlestick chart data** from MongoDB to support trading and market-analysis workflows.

SKILLS

Frontend & State — React, TypeScript, JavaScript (ES6+), Next.js, HTML5, CSS3, Redux, TanStack Query (React Query), Tailwind CSS, Styled Components, React Native, Three.js

Architecture & UX — Frontend architecture, system design, design systems, reusable component libraries, state and data-flow design, API contracts, responsive design, accessibility (WCAG), performance optimization, Webpack, Vite, Storybook

Testing & Quality — Automated testing, unit testing, integration testing, end-to-end testing, Jest, Vitest, React Testing Library, Cypress, Playwright, code reviews, debugging, refactoring, production reliability

Backend & Platform — Node.js, Express, Java, Spring Boot, GraphQL, REST APIs, MongoDB, Docker, CI/CD; working knowledge of PostgreSQL, AWS, observability and monitoring

AI & Workflow Tooling — Claude, Codex, Cursor, LangChain, Temporal, prompt engineering, agent orchestration, retrieval-augmented generation (RAG), LLM evaluation, groundedness assessment, function and tool calling

Leadership & Delivery — Technical leadership, frontend leadership, architecture decisions, engineering standards, code and design reviews, mentoring, interviewing, stakeholder management, cross-functional delivery, distributed teams, Agile delivery, end-to-end ownership, roadmap and requirements shaping
