PROFILE

Frontend-heavy Full Stack Engineer with 8 years of experience building customer-facing products, internal platforms, and scalable web applications. Strong track record across React, TypeScript, Next.js, frontend architecture, and end-to-end product delivery, with experience driving cross-functional execution and building AI-assisted engineering workflows.

EDUCATION

Liverpool John Moores University, 11/2025 – Present
Master's in Artificial Intelligence and Machine Learning Liverpool, United Kingdom

International Institute of Information Technology 05/2024 – 10/2025 | Bangalore
Bangalore (IIIT Bangalore), Executive Post Graduate
Programme in Machine Learning and Artificial Intelligence
with Specialization in Generative AI

RNSIT, Bachelor of Engineering in Computer Science 2014 – 2018 | Bangalore, India

WORK EXPERIENCE

Atlassian, Senior Software Engineer 02/2024 – 03/2026 | Bengaluru, India

- Drove improvements to help article discovery by redesigning search workflows, revamping the UI for easier navigation, adding trust signals, and integrating new data sources to surface more useful content, contributing to **\$5M+ in annual savings**.
- Designed and built a **multi-agent ticket analysis pipeline** that processed thousands of support tickets using a coordinator agent and specialized identifier, verifier, and rating agents to surface prioritized automation opportunities, reducing manual review effort for engineering teams.
- Expanded team delivery capacity by mentoring backend engineers to contribute effectively to frontend work, reducing bottlenecks on cross-functional initiatives.
- Owned **end-to-end** feature delivery, from stakeholder alignment and requirement shaping through task decomposition, execution, and delivery.

Amazon, Frontend Engineer II 05/2022 – 01/2024 | Bengaluru, India

- Led the redesign of a critical internal X-ray pipeline tool, shaping API contracts, application data flow, and UI architecture to replace a deprecated system with a more seamless operator experience, reducing operator time by **50%**.
- Owned frontend delivery end to end and worked closely with the ML team to refine model outputs around user needs, improving usability and enabling richer extraction of **cast details from end credits**.

fabric, *Software Developer 2*

03/2022 – 05/2022 | Bengaluru, India

- Contributed to storefront architecture and development for composable commerce experiences tailored to customer needs.

Spacejoy, *Software Developer III*

11/2019 – 02/2022 | Bengaluru, India

- Architected and built Spacejoy's **0-to-1 platform** using React, Next.js, and Tailwind CSS, designing UI and UX workflows that coordinated interactions across end customers, designers, and 3D artists.
- Built an internal storefront that enabled designers to add items to cart while keeping room designs aligned with planned budgets.
- Developed a **3D model viewer** using Three.js and collaborated with the Unity build team to understand rendering nuances, enabling better design decisions internally and later bringing **360-degree product visualization** to both internal and customer-facing storefronts.
- Implemented **cross-product authentication** across Spacejoy experiences, creating a more seamless login journey between offerings such as Canvas room design and designer-led room design.
- Contributed to the development and launch of the **Spacejoy React Native app**, helping ship it to the App Store within **2 months** of project inception.

ClearTax, *Software Developer I*

04/2019 – 10/2019 | Bengaluru, India

- Helped revamp **ClearGST**, ClearTax's B2B GST filing platform, contributing from the initial planning phase and developing core shared components that improved consistency and accelerated feature development across the application.

Throughbit, *Software Developer*

06/2018 – 04/2019 | Bengaluru, India

- Built interfaces for interacting with blockchain nodes and executing transactions on an OTC platform using **bitcoind**, **MongoDB**, and **Node.js**.
- Designed and implemented a security-focused transaction component for Bitcoin-based coins, enabling offline signing and separate transaction publishing for safer wallet transfers.
- Generated **candlestick chart data** from MongoDB to support trading and market-analysis workflows.

SKILLS

Frontend — React, TypeScript, JavaScript, Next.js, HTML, CSS, Tailwind CSS, Styled Components

Backend — Node.js, Express, GraphQL, Java

Tools & Infra — Git, Docker, VS Code, Cursor, Claude, Codex

Workflow — Jira, Asana, Trello

Engineering Productivity — AI-assisted prototyping, debugging, refactoring, documentation, test scaffolding
